CEO Message

We are truly appreciated to your interested in DAEWOO CONBIL,
We are a dedicated manufacturer of Construction and Building materials in South Korea.
Especially, we produce and provide the GRP sectional water tank, Steel water tank,
PE lining, artificial stone, underground electric joint box, bath tube, bath ceiling panel
to the customer satisfaction.

As an the front runner of construction and building materials, we creates the best qualified products based on the newest facilities and a strict quality control system. We have never compromised on the quality and the services provided to the global customer. We believe in keeping the customers happy and providing them with the best products at a reasonable cost.

All our staffs who will support you with their best efforts by keeping in constant touch with your company and informing about the market requirements.

We look forward to a wonderful relationship together and success for all concerned.

Thank you.

Sincerely DAEWOO CONBIL Co., Ltd.

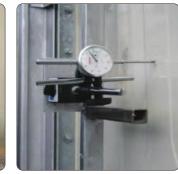

Physical property

DAEWOO CONBIL panel and reinforced parts confirmed by a stric quality standard

ПЕМ	VALUE
Tensile strength	99 <u>.</u> 5MPa
Flexural Strength	165MPa
Flexural Modulus of Elasticity	13800MPa
Barcol Hardness	70
Absorption Rate	0.01%
Glass Fiber Content	32.1%
Odor & Taste	No Defects
Turbidity	Below 0.5 degree
Color	Below 1 degree
Light Transmission	Nil
Heavy Metals	Not Detected
Consumption of KMnO4	0 <u>.</u> 3mg/L
pH(20'C)	6.9
Phenol	Not Detected

Test for physical property

Test for Panel Transformation

Test for Hydraulic Pressur

Process of erection DAEWOO CONBIL GRP sectional water tank

Concrete foundation for the erection of water tank

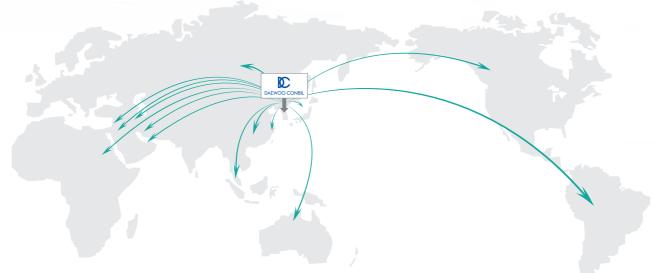

Erect wall and partition panel

Assemble roof panel and manhole

Delivered high quality products to global customers

It is the time for you enjoy DAEWOO CONBIL water tank with best Quality and leading Technology.

Tank Size 9m x 25m x 4mH: 900 Ton

Tank Size 6m x (3+3)m x 2mH : 72 Ton

What is DAEWOO CONBIL GRP Water Tank?

GRP Sectional Panel Tanks are constructed of panels made from SMC(Sheet Molding Compound) by hydraulic hot press under

high temperature (150°C) and pressure conditions to maintain the best endurance.

Using stainless steel for the interior structure and plated steel for the exterior, the panel exhibits excellent resistance to erosion.

Easy installation with on—site bolt assembly and Tank shape and volume can be freely designed with no restrictions based on site location, weather or climate.

COMPARISON: DAEWOO CONBIL GRP panel type vs Other types

	Water quality	Water tightness	Durability	Transportation	Maintenance	Anti-corrosion	Installation
DAEWOO CONBIL GRP Tank	0	0	0	0	0	0	0
Concrete Tank	X	Δ	Δ	X	Χ	0	Δ
Steel Tank	Δ	0	0	Δ	Х	X	X
Stainless Steel Tank	0	0	0	Δ	Δ	Δ	Х
GRP Hand Lay-up tank	Δ	0	0	X	Δ	0	0

 \bigcirc : Very good \bigcirc : Good \triangle : Normal \bigcirc X : Poor

Structural Analysis of DAEWOO CONBIL GRP Panel

DAEWOO CONBIL GRP water tanks are designed to be the safest panels through optimized design.

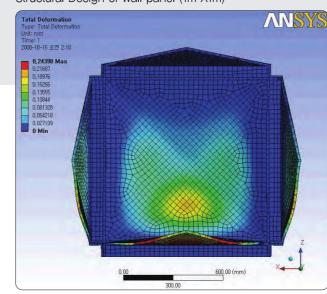

If the panels are reliable, the cost of reinforcement can be reduced and the best water tanks can be made at the most economic cost,

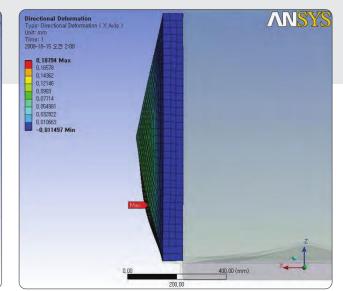

Design Basis: External force \(\) Maximum feature / Safety Factor

Item	Design Condition
Seismic load	horizontal Seismic Kh = 2/3 Vertical Kv = 1/3
OCISITIIC IOAU	Designed bases on Kh = 1/3G, horizontal seismic load,
	Water Level [Height in Meters] x 0,1KGF/om² [0,01MPa]
Hydrostatic	Designed to stand against hydrostatic pressure enough
Pressure	The max, change of side wall is less than 1,0% of
	total height left in Water for 48 hours,
Snow Load	60 kgf/m² [at the base of 30cm of snow depth]
Show road	Designed to stand under 200kg/m² enough
	Wind Load -
Wind Load	255 kgf/m² [2,55 x 10-3 Mpa]
WING LOAG	Designed to stand under max,
	60m/sec even in case tank dose not include water.
Illumination	Illumination - Under 0,1%
Water	Under 30°C (normal) / Under 50°C (maximum)
Temperature	(Special making in case of thermal spring)

^{**} GRP Panels are suitable to assemble the roof panel of stainless steel tank to avoid the rust by high concentration of chlorine contents

Various Shape and Size of DAEWOO CONBIL GRP Panel

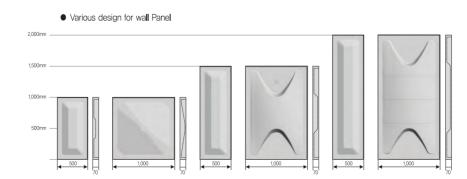

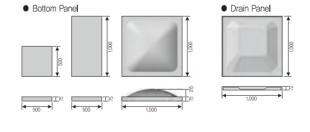

Own designed panel

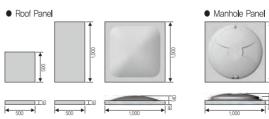

DAEWOO CONBIL produces exclusive panels and providing such as partition, manhole, flange and drain by the purpose.

 Exclusive Panel for connecting Flange Development of Exclusive Panel for Flange in Korea.

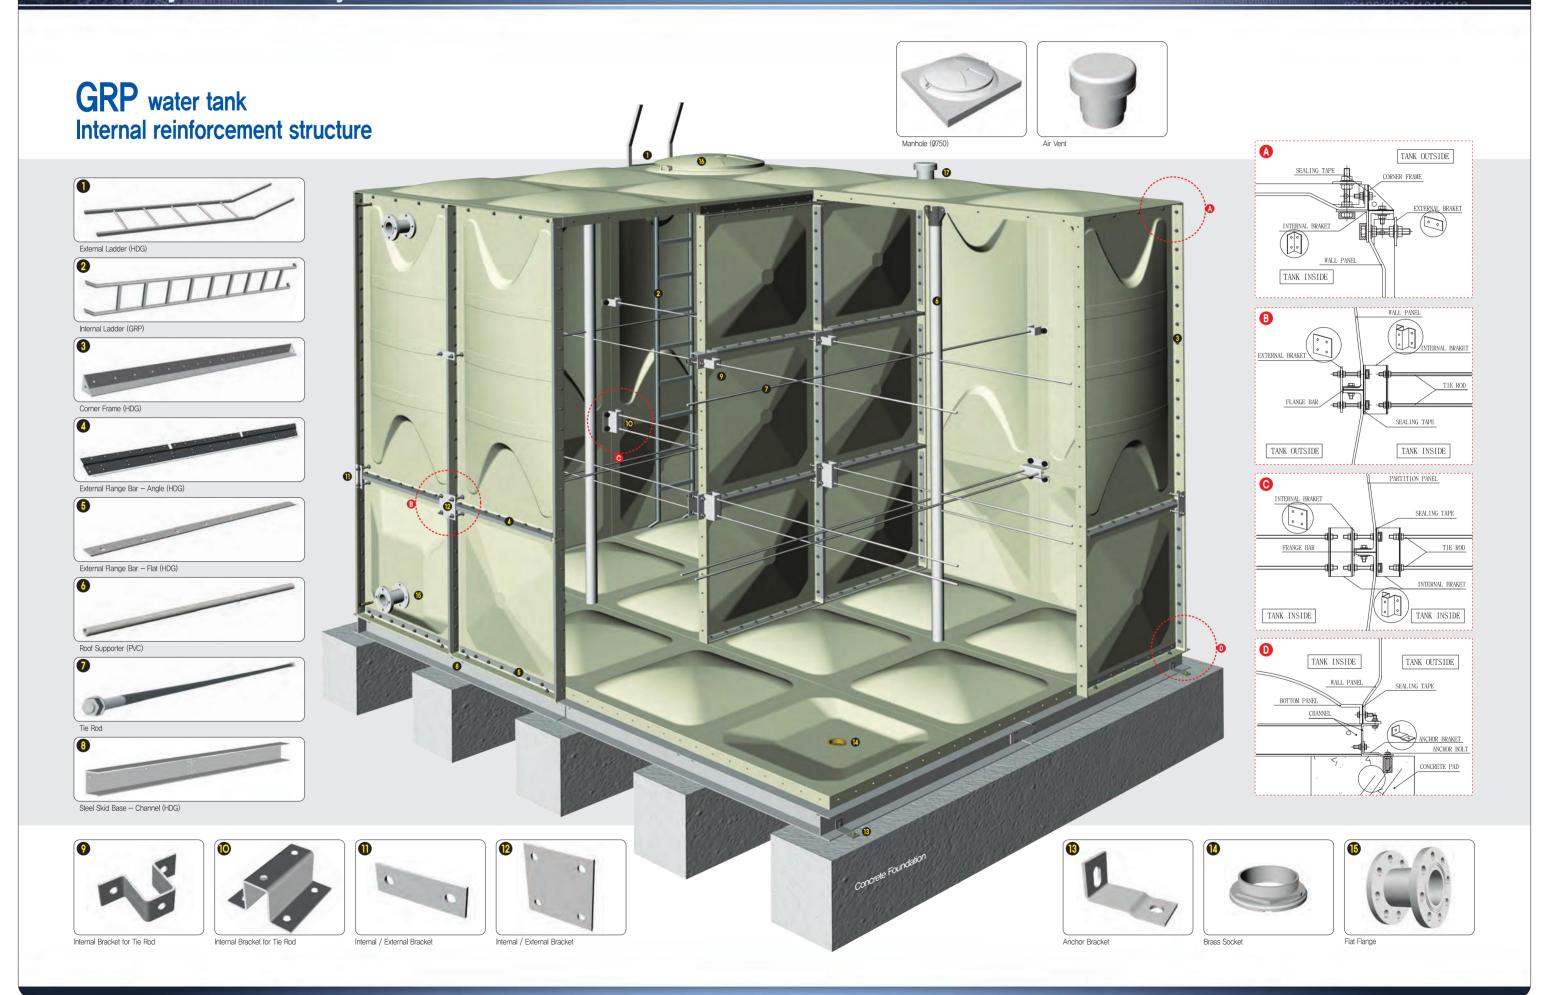

Hygienic Panel

DAEWOO CONBIL panel which is possible to make the GRP panels in a variety of colours.

In most cases, however, this type of tank is installed in the open, exposed to direct sunlight.

If the GRP panels are translucent,

the growth of algae and other micro-organisms would be accelerated.

After extensive testing and research,

DAEWOO CONBIL has adopted panel to minimize this problem, completely opaque and does not permit the passage of any light through it.

A typical problem with steel tanks has always been the high thermal conductivity and expansion of coefficient of steel. These characteristics can cause loosening of the panel connecting bolts in areas of wide temperature change

Cracked surface for Concrete water tank after 3 years installation

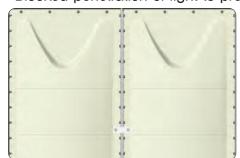

Rusted steel for STS Water tank after 3 years installation

Inside state of DAEWOO CONBIL GRP Water tank after 3 years installation

Blocked penetration of light to prevent algae growth

Various design by water tank capacity

Various sized panels can make the below tanks that utilize the most horizontal & perpendicular space and also can be erected from small capacity tank to huge tank.

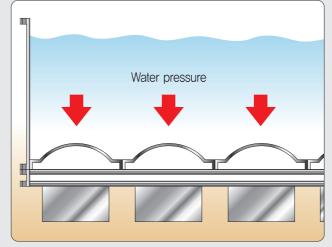

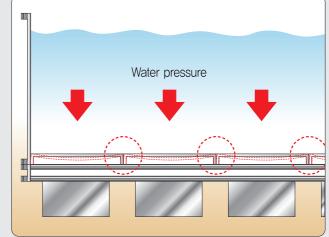

Safety of water pressure

The convex bottom panel can be the water pressure created by filling the tank seals the joints preventing leakage. In other type tanks, water pressure can loosen the joints breaking the seal, and allowing the stored water to leak out.

DAEWOO CONBIL convex bottom panel

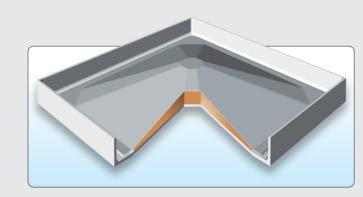

General bottom panel

Excellent Insulation

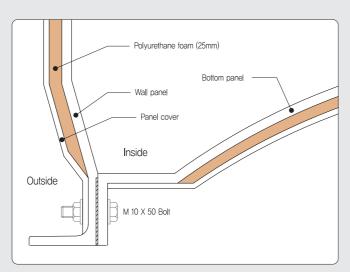

The heat insulation panel with 3 layers structure improves heat insulation effect, protects water condensation on the outside of the tank and minimizes temperature variation of the stored water.

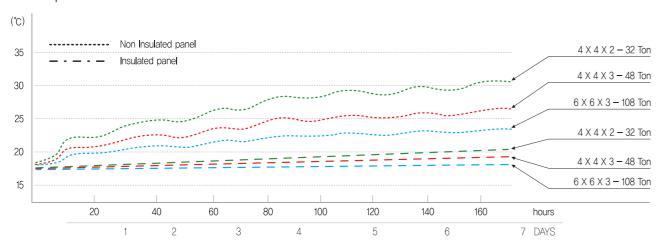

Comparison of Thermal Conductivity

Tank type	Thermal Conductivity Kcal / m.hr°C (j / m hr°C)
STEEL	37.0 (1.55 X 100,000)
GRP (Non-insulated)	0.15 (630)
GRP (Insulated)	0.02 (84)

Tank type	Coefficient of Overall Thermal Transmission Kcal / m²,hr°C (j / m² hr°C)			
	Air – Panel – Air	Water -Panel -Air		
STEEL	14.3 (59.9)	24 (100)		
GRP (Non-insulated)	3.0 (13)	5 (21)		
GRP (Insulated)	0.9 (3.8)	1 (4)		

Temperature curve for inside water tank

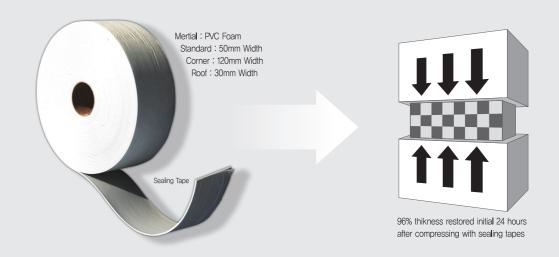

Water Tightness

The joints are sealed with a special sealing tape for GRP sectional panel water tank with long experience and technology. It maintains soft itself and adhesives even at low temperature.

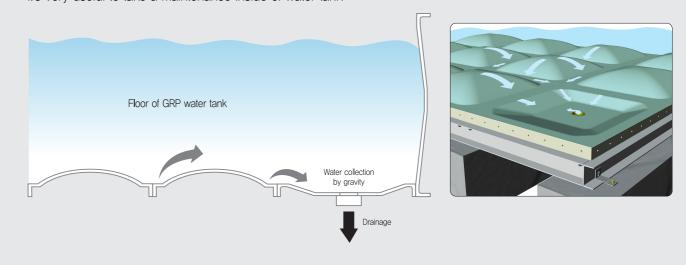

The combined flange thickness at the panel joints is sufficient to meet any stress imposed.

This self-sealing feature eliminates the possibility of separation and hence prevents water leakage of the tank,

Complete Drainage

The convex bottom panels with a concave drain panel system make sure complete and fast drainage. It's very useful to take a maintenance inside of water tank

14 • www.dotank.kr • 15

Partition Water Tank

Suitable for the confined area

The water tank for two different purposes are needed in a confined area or boiler facility.

As an example 16 tons water tank, the partition type can be divided by two tanks in one as using half(8 tons) for drinking water and another half(8 tons) for service water.

If the separated water tank installed as shown on the below picture, you have to install two different tanks with a maximum each 6 tons, because you need to keep 1 meter distance between each separated tanks for maintenance and operating space.

Boiler Potable water Formal Potable water

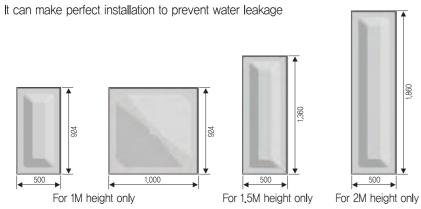

Partition water tank Potable water Potable water Partition panel Boiler Emergency or Firelighting water

 $2m(W) \times 4m(L) (2m + 2m) \times 2m(H) = 16 tons$ - Total 16 tons by partition water tank

Various panel size for partition type water tank

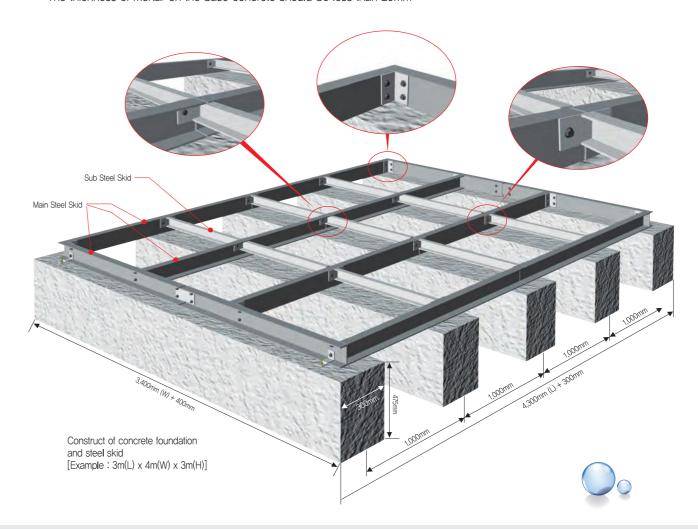

DAEWOO CONBIL has exclusive partition panel according to the various size of different height and width so it doesn't need to cut the another panel for patition.

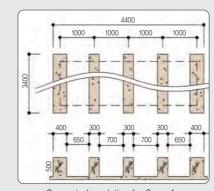

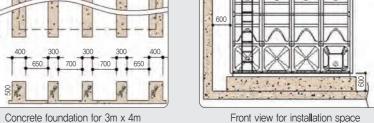

Concrete Foundation & Steel Skid

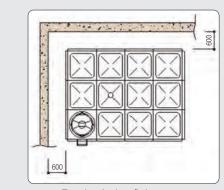

- Customers should construct a concrete foundation according to the designated water tank specification and the firmness of the site.
- The strength of the base concrete should be at least 180kg/cm2
- The thickness of mortar on the base concrete should be less than 20mm

n space Top view for installation space

16 • www.dotank.kr • 17

For more than 2.5M height

Specification of steel skid

- 1. Durability reinforcement parts by optimized structural designed
- 2. Providing all accessories to able erect water tank at construction site
- 3. Safety construct by bolt assembly without weldding and make a short construction period and reduce the cost

Tank Height		Steel skid A (Main)		Steel skid B (Sub)
Height 1m \sim 2,5m	angle 75 X 75 X 6mm		channel 75 X 40 X 3mm	
Height 3m ∼ 4m	channel 125 X 65 X 6.5 X 8mm		channel 75 X 40 X 6mm	
Height 4,5m \sim 5m	channel 150 X 75 X 8 X 10mm		channel 100 X 50 X 6mm	

^{*} The above list is recommendable standard. It can be redesigned by customer's requirement and condition of construction site.
